EDUCATION

Degree/Examination	Year	Institution
B.Tech (CSE with spec. in IoT)	2023 - 2027	Netaji Subhas University of Technology, Delhi
Class XII (CBSE)	2022	Rishikul Vidyapeeth Alipur, Delhi
Class X (CBSE)	2020	Rishikul Vidyapeeth Alipur, Delhi

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, TypeScript, SQL, Go
Databases & DevOps: PostgreSQL, MongoDB, Redis, Neon, Supabase, Docker, AWS, Azure, CI/CD
Full Stack: Node.js, Express.js, REST APIs, GraphQL, WebSockets, React.js, Next.js, TanStack Query
Tools: Git, LiveKit, Deepgram, ElevenLabs
Core CS: DSA, System Design, Operating Systems, DBMS, OOPS, Computer Networks
Soft Skills: McKinsey Forward, Strong communication, Problem-solving, Leadership

EXPERIENCE

SDE Intern at GydeXp

Aug 2025 – Feb 2026

- Enabled automated voice-based hotel reservations by architecting a real-time conversational AI booking agent.
- Reduced API infrastructure costs and enhanced system response reliability by implementing LLM prompt caching.
- Achieved 95% tool-call accuracy across 500+ conversations and prevented duplicate reservations by engineering hallucination guardrails, tool-result validation, and idempotency flags.
- Delivered real-time data synchronization and secure system access by building a scalable backend (for all three platforms i.e. hotel, guest and staff) utilizing Node.js, Express, PostgreSQL, Socket.io, and JWT/RBAC controls.

PROJECTS

Virtual Avatar with Indian Sign Language Support

Python, PyTorch, Flask, Whisper, LSTM, Docker

- Established a real-time, accessible classroom experience for deaf education by developing an end-to-end speech-to-sign pipeline that drives a 3D avatar using OpenAI Whisper ASR and 800+ SiGML gestures.
- Ensured uninterrupted translation performance by architecting a highly fault-tolerant text-to-gloss engine, combining a custom Seq2Seq Bidirectional LSTM model with a deterministic Stanford Parser fallback.
- Accelerated continuous model improvement and vocabulary expansion by engineering a robust ML data ingestion pipeline with an automated user-feedback loop and Kaggle-integrated retraining workflows.

Cash Management & Reconciliation Software

Next.js, PostgreSQL, TanStack Query, Rechart, Google APIs

- Engineered a full-stack cash management SaaS adopted across a chain of 10 retail stores by developing automated financial workflows and real-time data synchronization.
- Reduced recap update latency by over 98% (from 800ms+ to ~16ms) by implementing synchronous state updates and optimizing batched database saves.
- Slashed month-end financial close time from 3 days to 10 minutes by automating 2-way reconciliation (DSR to bank) through Gmail/PDF ingestion and merchant-ID matching.

LegalSetu

React.js, Tailwind CSS, AWS, Firebase, Gemini

- Expanded legal accessibility across 13 regional languages by engineering an AI-powered legal assistant capable of real-time voice and text-based counsel, leveraging Gemini AI and Google Cloud STT/TTS.
- Automated complex government form-filling and legal document analysis workflows by building an intelligent processing pipeline with AWS S3, enabling users to intuitively query contracts clause-by-clause.
- Streamlined verified lawyer discovery and consultation by connecting users with advocates within a 5km radius, architecting a low-latency real-time messaging backend using Socket.IO, Node.js, and Google Maps API.

ACHIEVEMENTS & AWARDS

- Winner - Hack-A-Tone, IIT Delhi (1000+ participants).
- Winner - Adobe Express Add-ons for Enterprise Hackathon (550+ participants).
- Winner - IIT Delhi Alumni Day Hackathon 2025 (400+ participants).
- Led a high-performing team that consistently secured Top 3 positions across 8 hackathons.
- Developed two SaaS platforms—Savra Edu (1000+ users) and Sports Planet (10 outlets)—currently in production.
